

Introduction to Python

Instructor: Dr. Ashis Sahoo

Total Lessons: 1

This course provides a comprehensive introduction to Python, one of the most popular and beginner-friendly programming languages. It is designed for students with little or no prior programming experience and focuses on building a strong foundation in coding concepts. Learners will explore fundamental topics such as variables, data types, operators, control structures (loops and conditionals), functions, and basic data structures like lists, tuples, and dictionaries.
